

## Decorator Urchin

- GROUP/PHYLUM:** Echinoderm
- COLOR:** Black - Brown - Orange - Green - Red - Purple
- MOVEMENT:** Spines move in any direction. Thousands of tubed feet. If turned upside down they will right themselves again
- TEXTURE:** Covered in spines.
- SHAPE:** Round - Oval. Outer shell is called a 'test'. Length ranges from 1-20cm
- HOW IT EATS:** Moves over food - has a mouth on the underside with 5 large stabbing teeth. Stabs at food making it into a pulp which it then sucks up
- WHAT IT EATS:** Dead fish - algae - sponges
- DEFENCE:** Spines for protection. Wedge themselves between rocks to hide from fish
- JOB:** Cleaning the ocean floor

**This clever creature covers itself with rocks and coral for camouflage**
